

Material Technical Data Sheet

UniChem Mix-EDTA Chelater

- **General information:**

Appearance: Green Powder
Description: Used as plant nutrient supplement for the correction of micro-elements deficiency in alkaline and calcareous soils.
Used in agricultural, horticultural and ornamental crops.
Suitable for direct apply to soil, spray, or drip irrigation systems, or as foliar application.

- **Chemical Analysis:**

Chelating Agent	EthyleneDiamineTetraAcetate-DiPotassium
Fe (EDTA form)	4%
Mn (EDTA form)	4%
Zn (EDTA form)	1.5%
Cu (EDTA form)	1%
B	0.5%
Mo	0.1%
Mg	5%

- **Application Directions:**

Soil Application:

Apply around the plants, apply water within 4 hours of treatment.

Foliar Application:

Do not apply when crop is under stress, best application time is after irrigation on a calm day but not during strong sunshine.

A non-ionic wetting agent should be added to the spray tank.

UniChem Mix EDTA Chelates should be applied alone as foliar application.

- **Storage:**

Use cool & dry storage places away from direct sunshine. Keep away from Acids, Alkalis, reduction Agents. etc.
